

Carbon Footprint 2015

Clifden eco Beach Camping & Caravanning Park

Februar 2016

This report summarizes the carbon footprint of your campsite for the year 2015. The Carbon Footprint is based on the GHG Protocol Corporate Value Chain Accounting. It considers all hotel relevant consumptions within this year. All input data have been validated through myclimate.

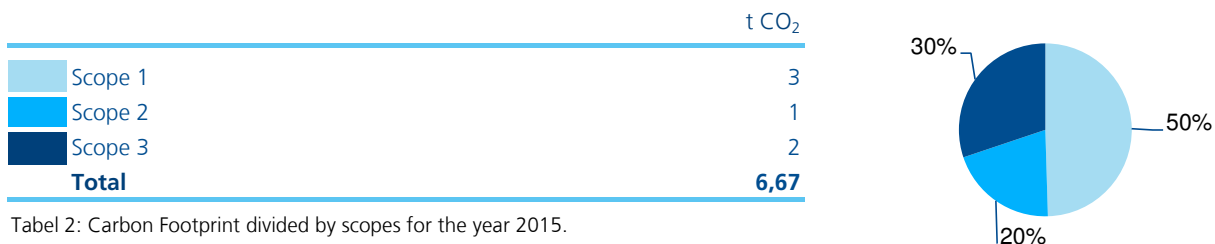

Tabel 1: Carbon Footprint divided by category 2015.

Total Emissions Hotel:

Total Emissions	6,67 t CO ₂
CO ₂ e per guest night (a)	37,07 kg CO ₂

Scopes:

Combustion due to own facilities lead to 3,3049167 t CO₂ (Scope 1). 1,35456 t CO₂ (Scope 2) result from purchased energy and emissions from services and purchased goods through a third party lead to 2,01257442t CO₂ (Scope 3).

Tabel 2: Carbon Footprint divided by scopes for the year 2015.

Alle Werte sind in CO₂ Äquivalenten (CO₂e) und berücksichtigen somit die 6 relevanten Treibhausgase nach IPCC 2007 (Kohlenstoffdioxid, Methan, Stickstoffdioxid, Hydrofluorkarbonate, Perfluorkohlenwasserstoffe und Schwefelhexafluorid).
